How to update a content of deployment overlay in EAP 6

⊘ **SOLUTION VERIFIED** - Updated June 27 2019 at 9:49 PM - English ▾ ()

Environment

- Red Hat JBoss Enterprise Application Platform (EAP) 6.x

Issue

- How do I update a content of deployment overlay in EAP 6
- I'm using deployment overlay (https://access.redhat.com/solutions/383393) and would like to update the specified content. Can I update the specified original content directory?

Resolution

When you want to update the deployment-overlay content, please execute the following CLI to remove the existing config and upload new content:

```
deployment-overlay remove --name=myOverlay --content=/foo/bar.html
deployment-overlay upload --name=myOverlay --content=/foo/bar.html=/tmp/newfile.html --
redeploy-affected
```

Note that the deployment-overlay content configured with deployment overlay is copied and located under `$JBOSS_HOME/standalone/data/content/` . For example, the following setting means that the deployment-overlay content is stored as
`$JBOSS_HOME/standalone/data/content/7d/91e92683856d8b018da09975d6cc8320553ccf/content` :

(https://access.redhat.com/)

```
<deployment-overlays>
    <deployment-overlay name="myOverlay">
        <content path="/foo/bar.html" content="7d91e92683856d8b018da09975d6cc8320553ccf"/>
        <deployment name="example.war"/>
    </deployment-overlay>
</deployment-overlays>
```

So, updating the original file, which you specified in CLI, does not become effective. (And, it means that you can delete the original file after completing cofiguration.).
